

Merwave — Quiz Funnel Copy

Product: Merwave Wavy Hair Starter Kit **Avatar:** The "Curly Girl Refugee" — women who believe their hair is curly, have used curly products for years, and watch their "curls" fall flat, greasy and lifeless **Awareness:** Solution-aware (tried curly products, blames her hair) entering on a misdiagnosis **Length:** Full diagnostic (17 screens) **Date:** June 9, 2026

The reframe this funnel runs on: She doesn't have difficult curly hair. She has fine **wavy (Type 2)** hair that's being crushed by curly products built for thick, coily textures. Flat, greasy, won't-hold is the *symptom* of the wrong category. The quiz manufactures that realisation one click at a time, then hands her the one kit built for the hair type she actually has.

The villain: Heavy curl creams, butters and oils — and the curly-hair advice that misdiagnosed her — dragging her fine wavy strands flat.

Placeholders flagged inline as [confirm] — proof counts, stats, dates, guarantee terms and scarcity mechanism need client sign-off before launch. The diagnosis and projection screens are positioning language for a self-assessment, not medical claims — flag for compliance review.

Page 1 — Hair Type Self-ID

Goal: Lowest-friction first tap that segments her and gets her to self-label as "curly" — the label the diagnosis later overturns.

Heading: Is your hair actually curly? Take the 2-minute hair analysis. **Subtext:** Answer a few questions about how your hair really behaves, and we'll tell you what type your hair actually is — and the routine built for it. **Social proof:** "Six years and a bathroom full of curly products later, this was the first thing that actually explained my hair. Turns out it was never curly." — [NAME], verified customer [confirm – swap for a real review] **Question:** Which of these sounds most like your hair? **Answers:**

- Curly — but it never behaves the way curly hair is supposed to
- Curly one day, flat the next
- Frizzy and puffy more than anything
- I've given up trying to label it

[Design note: four tappable cards, simple hair-texture line icons, auto-advance on select. Progress bar starts here. Logo in header.]

Strategy note: the easiest possible click also segments her and locks in the "curly" self-label we pay off at the diagnosis.

Page 2 — Primary Concern

Goal: Surface the #1 pain in her own words; the pick personalises the diagnosis and offer downstream.

Question: What's the single most frustrating thing about your hair right now? **Answers:**

- My curls fall flat by lunchtime
- It goes greasy and stringy a day after washing
- I pile on product and it still won't hold
- It looks amazing wet, then drops the second it dries
- It's just flat and lifeless, whatever I do

[Design note: icon per answer, single-select, auto-advance.] *Strategy note: every option is a "that's painfully me" mirror — recognition agitates harder than any sentence we could write at her.*

Page 3 — Symptom Recognition

Goal: Earn a clean "yes, that's me" on the core symptom the mechanism will later explain.

Question: When your hair dries, do the curls or waves go limp and lose their shape? **Answers:**

- Yes — every single time
- Sometimes, depends on the day
- No, they hold fine

[Design note: minimalist buttons.] *Strategy note: isolates the signature symptom (shape collapses on drying) so the verdict feels like it read her hair, not guessed.*

Page 4 — Severity

Goal: Make her quantify how bad the collapse is.

Question: By the end of the day, how much of your hair's shape is left? **Answers:**

- Basically none — flat and stuck to my head
- About a quarter — the rest has dropped
- Around half holds
- Most of it stays put

[Design note: visual scale, a wave flattening from defined to flat across the four options.] Strategy note: the worse she rates it, the more room-for-improvement the diagnosis can credibly promise.

Page 5 — Duration

Goal: Surface sunk cost and build urgency.

Question: How long have you been calling your hair "curly" and fighting to make it behave?

Answers:

- Less than a year
- 1–3 years
- 3–5 years
- As long as I can remember

[Design note: simple timeline selector.] Strategy note: the longer she's been at it, the more wasted money sits behind her — and the bigger the relief when the reframe lands.

Page 6 — Desired Outcome (multi-select)

Goal: Let her stack her own reasons to buy; these exact picks get fired back on the results and offer screens.

Heading: If your hair finally cooperated, what would you want from it? **Subtext:** Pick everything that applies. **Answers (multi-select):**

- Soft, defined waves that actually last the day
- No more grease or weighed-down, stringy roots
- A routine that takes minutes, not a whole evening
- Hair that looks effortless, like I just woke up like this
- To stop buying product after product that never works

CTA: Continue [Design note: multi-select, buttons change colour when selected.] *Strategy note: she writes her own benefit list here — the close just reads it back to her.*

Page 7 — Validation Interstitial

Goal: First dopamine and trust, and the reframe seed planted gently so the diagnosis doesn't arrive from nowhere.

Heading: You're not bad at curly hair. **Subtext:** Most women fighting "difficult curls" don't have curly hair at all — they're wavy, and wavy hair behaves nothing like curly hair. 47% never find out. [confirm stat – Merwave's own figure] Your results will show which one you are. **Proof line:** [5,376] women have already taken this analysis · ★4.8 [confirm current count + rating] **CTA:** Continue [Design note: before/after strip – flat, weighed-down "curls" on the left, defined waves on the right. No question on this screen.] *Strategy note: relieves the self-blame, seeds the category swap, and gives her a reason to keep going instead of bailing mid-quiz.*

Page 8 — Strand Type

Goal: Profiling that sets up the mechanism (fine strands can't carry curl-weight product) without stating it yet.

Question: How would you describe the actual strands of your hair? **Answers:**

- Fine — thin strands, usually a lot of them
- Medium
- Thick and coarse
- Not sure

[Design note: strand-thickness diagram for each option.] *Strategy note: fineness is the crux of the whole diagnosis — this answer quietly builds the case before she sees the verdict.*

Page 9 — Product Load

Goal: Surface the over-product spiral as a root-cause input.

Question: On a wash day, how many products go into your hair? **Answers:**

- 1–2
- 3–4
- 5 or more
- I've genuinely lost count

[Design note: simple stacked-bottles counter.] Strategy note: the more she's layering on, the better the "too much weight" diagnosis fits — and the more wasteful her current routine looks against a 5-step kit.

Page 10 — Loader #1

Goal: Manufacture perceived value; make the result feel computed.

Heading: Analysing how your hair behaves... **Subtext:** Matching your answers against thousands of wavy and curly hair profiles to find your real hair type. [Design note: animated progress bar + spinner, ~3–4 seconds.] Strategy note: the labor illusion — a result you watched get "calculated" feels earned and worth paying for.

Page 11 — What She's Tried (*Why we ask — villain named*)

Goal: Build authority and name the enemy explicitly: curl-weight products on fine wavy strands.

Question: Which of these have you tried to fix your hair? **Answers (multi-select):**

- The Curly Girl Method
- Heavy curl creams and butters
- Oils and leave-in masks
- Strong-hold gels and mousses
- All of the above, if I'm honest

Why we ask: Almost every "curly" product is built for thick, coily hair that drinks up heavy butters and oils. On finer wavy strands, that same weight does the opposite — it drags the wave down until it falls flat and turns greasy. Knowing what you've used tells us exactly what's been weighing you down. [Design note: informational "why we ask" box directly under the answers.] Strategy note: reframes a data question as "this is how we personalise your fix," and pins her flat, greasy results on a named villain she can finally stop blaming herself for.

Page 12 — Wet vs Dry (*Why we ask — mechanism*)

Goal: Turn her most familiar, most painful observation into proof of the diagnosis.

Question: Straight out of the shower, how does your hair look while it's still wet? **Answers:**

- Gorgeous — defined and exactly what I want
- Good, but it changes as it dries
- Already a bit flat, even wet

Why we ask: Defined when wet, then flat and stringy as it dries is the signature of wavy hair carrying too much product weight. The shape is already there — it's being pulled flat by formulas your strands were never built to hold. [Design note: "why we ask" box.] Strategy note: "great wet, dead dry" is the thing she's never been able to explain — handing her the explanation is what makes the verdict feel true.

Page 13 — Loader #2

Goal: Anticipation peak right before the verdict.

Heading: Finalising your hair analysis... **Status checklist:**

- Mapping your wave pattern ✓
- Comparing curly vs wavy markers ✓
- Pinpointing what's weighing your hair down (*spinner*)
- Almost there...

[Design note: multi-step checklist with animated checks and a spinner on the active line.] Strategy note: the checklist makes the reframe feel clinical and earned, so the diagnosis lands as a finding rather than a sales line.

Page 14 — Diagnosis (*the aha*)

Goal: Flip her from "I'm bad at curly hair" to "I have wavy hair, and it's fixable" — the exact state that buys.

Heading: Your result: you're not curly. You're wavy. **Copy:** Fine strands, shape that looks great wet then drops flat and greasy as it dries, and years of heavy curly products that never held — your hair isn't curly. It's wavy, Type 2, and it's been weighed down this whole time. Here's the part no one told you: your wave pattern is still there. It's just being suppressed. **Data points:**

- Hair type: **Wavy (Type 2)**
- What went wrong: Curl-weight products on fine wavy strands
- Wave potential: **HIGH** (currently suppressed)
- Room for improvement: **HIGH**

CTA: Show me what's possible [Design note: a "wave meter" with potential reading HIGH but current expression sitting low in a "suppressed" zone. Side-by-side image – flat weighed-down hair vs defined waves – mirroring her state and her outcome.] *Strategy note: the discovery the whole quiz was built to earn. It names a real, branded problem she now believes she has — and frames it as fixable, which is what converts. [Flag for compliance review – wellness positioning, not a medical claim.]*

Page 15 — Projection

Goal: Hope plus specificity — and kill the "too good to be true" doubt with the first-wash result.

Heading: Here's what your hair does once the weight comes off. **Subtext:** From your very first wash, your waves start coming back. Based on your answers, expect soft, defined, frizz-free waves that hold all day by [Tuesday, August 4, 2026 — ~8 weeks, confirm]. [Design note: growth chart climbing from "You are here: weighed-down and flat" to "Defined waves that last." Mark "Wash 1 – waves return" early on the curve; put the target date at the top.] *Strategy note: the immediate first-wash payoff defuses her skepticism on the spot, and the concrete date makes the full transformation feel real, not aspirational.*

Page 16 — Qualification Pre-Landing

Goal: Make the offer feel earned by finishing the analysis, and the later scarcity credible.

Heading: Because your hair is wavy, there's exactly one routine built for it. **Subtext:** The Merwave Wavy Hair Starter Kit is made for fine, wavy (Type 2) hair — lightweight formulas that define your waves without the weight that's been flattening them. Because you qualify, it's covered by our 90-day money-back guarantee [\[confirm terms\]](#): defined waves, or your money back. **Killer proof line:** 47% of women never realise their hair is wavy. [\[confirm stat\]](#) You just did. **CTA:** See my kit [\[Design note: product shot with four benefit circles – Defines waves in one wash · Won't weigh hair down · 15-minute routine · Frizz-free for days.\]](#) *Strategy note: "because you qualify" turns the kit from a product she's being sold into a prescription she earned — which is what makes "your discount" believable on the next screen.*

Page 17 — Sales Page *(the close)*

Goal: Cash the entire buy-in on a visitor who's already accepted she's wavy and that this kit is built for her.

Heading: Your Wavy Hair Starter Kit — £20 off today **Subtext:** Everything your waves have been missing, in one 5-step system. ★4.8 from [5,376] reviews. [\[confirm\]](#)

The offer:

- £65 today (normally £85) — you save £20
- Around a 90-day supply, so it works out to roughly 72p a day for waves that finally hold

Why this kit, when nothing else worked:

- Five lightweight products made for wavy hair, not curly — so nothing drags your waves flat
- Defines your natural waves from the very first wash
- Leaves roots clean and light instead of greasy and weighed down
- A 15-minute routine that replaces the 5-product evening you've been doing
- Cruelty-free and colour-safe

Your 5 steps:

1. Cleanse Shampoo — washes without stripping

2. Repair Conditioner — hydrates and detangles
3. Wave Cream — defines the wave and cuts frizz
4. Cast Foam — builds shape and hold
5. Protect Gel — locks the waves in as they dry

Free gift: A Refresh Spray (worth £17) comes with your kit — it revives your waves between washes, no full restyle needed. **Guarantee:** 90-day money-back guarantee. [confirm] If your waves don't come back, you don't pay. **Scarcity / urgency:** [confirm real mechanism before launch – e.g. limited kits at the launch price; avoid a fake countdown] **Trust signals:** Free UK delivery · Secure checkout · Recommended by Emma Kenyon, Richard James, Naomi Jones and Rein & Co.

CTA: Bring my waves back [Design note: product hero, value stack, free-gift callout, guarantee badge, scarcity bar, secure-checkout badges, endorsement logos, free-delivery line.] *Strategy note: discount, stacked value, the £17 free gift, the guarantee and an outcome-framed CTA all land at once — and every one of them maps back to a pain or desire she selected earlier in the quiz.*

Build notes for Kasper

- **Single primary path.** If the client wants light branching, the cleanest version is severity tiers on Page 14 (mild / moderate / severe suppression) sharing one offer — not three full paths. Noted as an option, not built.
- **Confirm before launch:** the 47% stat, the review count and rating, the projection date, the guarantee terms, and the scarcity mechanism. Nothing here is invented — the gaps are flagged so the client fills them with figures they stand behind.
- **Compliance:** Pages 14–15 are positioning language for a self-assessment. Have legal eyeball them before this goes live.
- **Banlist:** scrubbed — no parallel-repetition stacks, no false-contrast stacks, no rhetorical or "imagine if" openers, no hedging, no emoji or exclamation spam. The one intentional contrast ("you're not curly, you're wavy") is the hook and stays.
